**Listing of Claims:**

Claims 1-12. (Canceled)

Claim 13. (Currently Amended) A concealed magazine slot arrangement for carrying at least a magazine on a user's body, comprising:

a magazine holder comprising an inner panel, an outer panel[[,]] having a front operation side[[,]] overlapped on said inner panel, and a plurality of slot dividers transversely and spacedly affixed between said inner and outer panels to form a plurality of magazine slots concealed within said inner panel, said outer panel, and said slot dividers for receiving said magazine;

a gear carrier provided on said front operation side of said magazine holder for carrying a gear thereon;

means for detachably fastening said magazine holder on said user's body, wherein said magazine holder is warped for fitting a curvature of said user's body, such that said outer panel is reinforced to substantially bias against said inner panel to physically self-adjust a shape of said magazine slots for retaining said magazine within said respective magazine slot of said magazine holder; and

a quick accessing fastener for securely retaining said magazine within said respective magazine slot and for providing a quick access of said magazine to withdraw from said respective magazine slot, wherein said quick accessing fastener comprises two pouch flaps detachably and adjustably attached to said inner and outer panels respectively within said magazine slot, and first and second fasteners respectively formed at said two pouch ~~flaps~~straps, wherein said first fasteners is detachably fastened with said second fastener to enclose said respective magazine slot for securely holding said magazine therein.

14. (Currently Amended) A concealed magazine slot arrangement for carrying at least a magazine on a user's body, comprising:

a magazine holder comprising an inner panel, an outer panel[[,]] having a front operation side[[,]] overlapped on said inner panel, and a plurality of slot dividers transversely and spacedly affixed between said inner and outer panels to form a plurality of magazine slots concealed within said inner panel, said outer panel, and said slot dividers for receiving said magazine;

a gear carrier provided on said front operation side of said magazine holder for carrying a gear thereon, wherein said gear carrier comprises a plurality of webbing straps longitudinally formed on said front operation side of said magazine holder, wherein each of said webbing straps is spacedly sewn on said front operation side of said magazine holder to form a plurality of gear slots for slidably receiving said gear therethrough;

means for detachably fastening said magazine holder on said user's body, wherein said magazine holder is warped for fitting a curvature of said user's body, such that said outer panel is reinforced to substantially bias against said inner panel to physically self-adjust a shape of said magazine slots for retaining said magazine within said respective magazine slot of said magazine holder; and

a quick accessing fastener for securely retaining said magazine within said respective magazine slot and for providing a quick access of said magazine to withdraw from said respective magazine slot, wherein said quick accessing fastener comprises two pouch flaps detachably and adjustably attached to said inner and outer panels respectively within said magazine slot, and first and second fasteners respectively formed at said two pouch ~~flaps~~straps, wherein said first fasteners is detachably fastened with said second fastener to enclose said respective magazine slot for securely holding said magazine therein.

15. (Original) The concealed magazine slot arrangement, as recited in claim 13, wherein two lower portions of said pouch flaps are detachably attached to said inner and outer panels via two pairs of hook and loop fasteners respectively, wherein said first and second fasteners are provided at two upper portions of said pouch flaps in such a manner that said pouch flaps are selectively attached to said inner and outer panels to adjust a height of said respective magazine slot for fitting said magazine therewithin.

16. (Original) The concealed magazine slot arrangement, as recited in claim 14,

wherein two lower portions of said pouch flaps are detachably attached to said inner and outer panels via two pairs of hook and loop fasteners respectively, wherein said first and second fasteners are provided at two upper portions of said pouch flaps in such a manner that said pouch flaps are selectively attached to said inner and outer panels to adjust a height of said respective magazine slot for fitting said magazine therewithin.

Claims 17-28. (Canceled)

Claim 29. (Original) The concealed magazine slot arrangement, as recited in claim 14, wherein said fastening means comprises at least two body straps sidewardly extended from two sides of said magazine holder respectively, and first and second connectors respectively provided at two free ends of said body straps, wherein said first and second connectors are detachably connected with each other for fastening said magazine holder on said user's body.

Claim 30. (Canceled)

31. (Previously Presented) The concealed magazine slot arrangement, as recited in claim 13, wherein said fastening means comprises at least two body straps sidewardly extended from two sides of said magazine holder respectively, and first and second connectors respectively provided at two free ends of said body straps, wherein said first

and second connectors are detachably connected with each other for fastening said magazine holder on said user's body.

Claim 32. (Previously Presented) The concealed magazine slot arrangement, as recited in claim 13, wherein said fastening means comprises a shoulder strap upwardly extended from said magazine holder and a waist strap sidewardly extended from said magazine holder such that said magazine holder serves as a vest for being worn on said user's body while said magazine slots are positioned at said chest of said user.

Claim 33. (Previously Presented) The concealed magazine slot arrangement, as recited in claim 14, wherein said fastening means comprises a shoulder strap upwardly extended from said magazineholder and a waist strap sidewardly extended from said magazine holder such that said magazine holder serves as a vest for being worn on said user's body while said magazine slots are positioned at said chest of said user.
